Cycle Deep-Dive: Major Cycle Theory & the State of Markets

By Skylar Simoncelli

Confidential

Executive Summary

This week, in one line: a sequenced roll-over — Bitcoin at one-year lows, silver −11%, oil −19% on the week — underneath a still-euphoric equity surface (S&P 500 at the 96th percentile of its year, VIX at the 8th). The question this edition goes deep on: is that the leading edge of a **major-cycle top**, or the winter you accumulate into?

Cross-timeframe convergence (this run): GOLD is convergent-bull — macro +4 / high +4 on the measured above-the-weekly-200-MA structural-bull regime (the medium layer dissents and sits on probation after a wrong-sign streak, so its vote is excluded). BITCOIN is neutral-with-divergence: the higher-timeframe layers lean accumulate on the measured cycle framework, while the raw-price ("blind") control reads outright bearish — a genuine disagreement we surface rather than paper over. SILVER is divergent.

Policy reality check: the popular "the Fed is about to cut" read is not confirmed by the policy market — FedWatch for July prices no-change at 60.4%, a 39.6% hike tail, and 0.0% ease. Gold's structural-bull case stands on its own moving-average regime, not on an imminent rate tailwind.

Scenario note: a "Major-Cycle Top / Long Winter" scenario was opened at 13% this run — the explicit antithesis of the house base case. Iran–US escalation sits at 3% (−2pp on the week); the live catalyst is the G7 leaders' statement out of Évian.

The two sections that follow — the **Cycle Deep-Dive** and the **Measured Backtests** behind it — are the heart of this edition.

Market Snapshot

ASSET	PRICE	DAILY CHG	WEEKLY CHG	SIGNAL
BTC	$62,766	n/a	+1.1%	below 50/200 SMA (downtrend)
Gold	$4,214.3	n/a	+2.8%	below 50/200 SMA (downtrend)
Silver	$65.53	n/a	+2.1%	below 50/200 SMA (downtrend)
WTI Crude	$75.23	n/a	-16.6%	below 50/200 SMA (downtrend)
DXY	$100.81	n/a	+0.6%	above 50/200 SMA (uptrend)
S&P 500	$7,500.58	n/a	+3.1%	above 50/200 SMA (uptrend)
Nasdaq 100	$30,406.19	n/a	+6.2%	above 50/200 SMA (uptrend)
VIX	$16.4	n/a	-23.8%	below 50/200 SMA (downtrend)
10Y Yield	$4.45	n/a	-1.7%	below 50 SMA, above 200 SMA

(Snapshot "Signal" reflects the daily 50/200 SMA. The cycle work below uses the weekly 200-period MA — the ~200-week MA — which is a different, slower line; gold is below its daily 50/200 SMA after this week's pullback yet still above its weekly 200-MA.)

Cycle Deep-Dive: Has the Major Cycle Topped, or Is This the Winter You Buy?

This is the hardest question in cycle theory, so here is the answer without flinching: the evidence does not yet support a major-cycle top — but it cannot disprove one either, and the honest version of this analysis is mostly about why those two statements coexist.

Start with the clock, because cycle theory is just nested clocks. The longest hand is the **Kondratiev long wave** (~40–60 years), the wave of the underlying technology platform: steam, then rail, then electrification, then the automobile-and-oil complex, then info-tech — and now, if the framework holds, AI. Inside it turns the **Strauss–Howe generational cycle** (~80–100 years) and its four turnings — High, Awakening, Unraveling, Crisis. Inside that, the **~5.5-year business cycle**: expansion → peak → contraction → trough. And nested tightest, the framework most BTC traders invoke — Bob Loukas's halving-anchored set: a ~16–18-year "great cycle" containing roughly four 4-year cycles, each containing annual and ~60-day phases. The discipline of the framework is that you read the small hands for timing and the big hand for whether to trust the small hands at all.

Here is the spine of the whole question, and it is sharper than it first looks. **The 4-year Bitcoin cycle and the 16–18-year major cycle are observationally identical right up to the next low.** Both say the same thing today: price is near the 200-week moving average, sentiment is washed out, and you accumulate. The desk view and the external consensus agree to an uncomfortable degree on that low — Cowen (Into the Cryptoverse), Alphractal's 912–922-day post-halving window, Olson's day-count overlay — all clustering on **~October 2026, a $40–55k band.** The two theories **diverge only *after* that low**, and they reveal themselves through a single number. If the 4-year cycle is merely intact, the post-Oct-2026 rally takes out the prior cycle high near **$124.7k** and a new bull is underway. If the major cycle has topped, that same low is a **lower high** inside a multi-year grinding decline, and the rally fails beneath $124.7k. That is the entire falsifiable test. Everything before Oct 2026 is shared liturgy; the schism is whether the next up-leg clears the old peak.

Now the measured evidence — the part of this report nobody else hands you, run against the full local price history (see the Measured Backtests box below). Three numbers lead. **One:** Bitcoin trading *below* its weekly 200-week MA has delivered **+118% annualized** forward return across the 15 cross-episodes in 11.8 years of history. The deep-bear zone below the 200-week line is where the money has been made — buying it, not fleeing it — and BTC is in that zone now (~$62.8k, RSI ~29, sixth percentile of the past year). **Two:** gold *above* its weekly 200-MA returns **+13.5% annualized versus +1.9% below it**, and gold is above now (~$4,214) — the structural bull, by this measure, is intact. **Three, the haven leg:** gold has returned **+19% annualized during the 28 episodes when the S&P was below *its* weekly 200-MA** — roughly double its baseline. That is the measured "safe haven in the long winter": if equities ever roll into a genuine major-cycle downturn, gold is the leg that has historically paid.

But credibility lives in the limitations, so here they are, unhedged. Every one of those backtests is drawn from a **single secular regime** — a 2014–2026 Bitcoin bull and a quarter-century falling-real-rate gold bull. By construction they are *silent* on the major-top scenario: a bull-only statistic cannot refute its own negation. "+118% below the 200-week MA" is a fact about a market that always recovered; it says nothing certain about a market that doesn't. Worse, Bitcoin has lived through **zero completed 16–18-year cycles** — the major-top thesis is, today, unfalsifiable by measurement. It can be narrated, not tested.

Two outside facts cut *against* the bear, and honesty requires pricing them. First, **Loukas himself is publicly cycle-intact, not topped — his recent stance floats a "double-cycle blowoff" that stretches the top with a low still to come inside an intact great cycle. The popular "major top" framing may be more bearish than the analyst it borrows from. Second, the dominant Kondratiev reading places 2024–2026 as the long-wave trough**

— winter bottoming, AI as the next up-leg — the near-opposite of "winter beginning." That is the strongest steelman of the bull case and deserves real weight. (Sell-side gold targets of $4,900–6,300 sit well above spot, but treat those as sentiment markers, not evidence — a desk target is a position someone is talking.)

So what about this week's tape? It has the exact texture a major top predicts: a **sequenced** roll-over — BTC at one-year lows, silver −11%, oil −19% — underneath a still-euphoric equity surface (S&P ~7,500, 96th percentile; VIX 16.4, 8th). A rolling top is a process, and process is what we're seeing. But the actual roll-over **mechanism — equity-vol contagion — is absent.** Until VIX breaks and the S&P cracks its own 200-week line, this is a commodity-and-crypto liquidation inside an intact equity bull, not the winter itself.

The decision, then, is the **same under both theses until Oct 2026** — the gift hiding in the symmetry: accumulate into the winter near the 200-week MA, but do not presume the launch — size as if the next rally might fail at $124.7k, because that is the test. Hold gold as the measured-robust haven leg; it is the one asset that pays in the scenario you fear. Keep cash as patient dry powder for the lower high that only the major-top world produces. The falsifiable test is clean and you can mark it on a wall: **does the post-Oct-2026 rally clear ~$124.7k, or fail beneath it?**

Measured Backtests: Major Cycle Theory

Run with pftui's strategy backtester against the full local price history (BTC-USD 11.8y, gold 25.8y, S&P 33.4y, rates 60y+). Returns are statistics over price ratios, lookahead-safe; they are **drawn from a single secular regime and are therefore silent on a true major-cycle bear — read them as "what the recovery-prone era did," not as proof the era continues.**

TEST	MEASURED RESULT	READ
BTC below its weekly 200-MA (15 episodes)	**+118% annualized** forward vs +13.4% above	The deep-bear zone is the accumulation zone — BTC is there now
BTC oversold (RSI<25, 18 instances)	**+20.8% @ 90d, +33.4% @ 180d**, ~65% up-rate	Oversold has paid at 3–6 months historically
Gold above its weekly 200-MA (13 episodes)	**+13.5% annualized** vs +1.9% below	Structural bull intact; gold is above now (~$4,214)
Gold while S&P is below its weekly 200-MA (28 episodes)	**+19.0% annualized** (≈ double baseline)	The measured "safe haven in the long winter"
Gold in falling-rate regimes (10y < its 200-day)	**+14.5%** vs +7.7% rising	Easing is a tailwind — but it is not on yet (FedWatch: 0% July ease)
S&P vs its weekly 200-MA (33y)	above +7.5% / below +10.6% annualized	For equities the MA cross is coincident, not predictive

Honest gaps: BTC has N=0 completed 16–18-year cycles (the major-top thesis is unmeasurable today); BTC's overlap with a real equity bear is only ~32 days (too thin to trust); and cash / short-Treasury total return is not a backtestable price series here, so the "patient cash" leg is asserted from yield levels, not measured like the rest.

Macro

> ⚠ 1 economic series past freshness SLA (worst: econ-initial-jobless-claims is 11 days old, SLA 72h) — figures below may lag

Current State

Regime state: transition. [] (confidence 33%).

INDICATOR	LATEST	DIRECTION	FRESHNESS

Unemployment Rate	4.3	n/a	2026-06-18

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	DX-Y.NYB	Structural bear -2 (managed-decline not collapse)
LOW	DX-Y.NYB	Warsh hawkish signal (+4 conviction jump May 24) creates near-term support 99-99.5, but COFER 56.1% (-31yr low) structural bear thesis intact
MACRO	DX-Y.NYB	Long-term structural bear case intact: COFER 56.1% Q1 (31-year low, fastest quarterly decline on record) on trajectory to 55% by Q3 and 50% by 2027
MEDIUM	DX-Y.NYB	Tight consolidation 98.6-100 with mild upside bias from two-driver thesis (safe-haven + rate differential per Lesson 307)
MACRO	DXY	Structural de-dollarisation bear (COFER -2.3pp/qtr, reserve_currency determinant 7→6) but near-term FIRM on positive real carry + safe-haven bid; structural and tactical point opposite ways
HIGH	SPY	Structural bear -3
LOW	SPY	The week's biggest divergence: SPY sits at 98.2% of its 52w range, above all SMAs, RSI 69.9 (near-overbought) while BTC collapsed -14% and crypto F&G hit 12
MEDIUM	SPY	Sticky-inflation margin compression plus a fading AI-momentum bid (AVGO -12.6%) removes the last leg holding indices up while labor softens into the recession scenario
HIGH	USD	Structurally neutral by design
LOW	USD	Dollar firm; cash/short-duration screens defensively in this tape
MACRO	USD	USD direction neutral, but the key macro point: in a Major-Cycle Long Winter, patient cash/dry-powder is a strategic stance, not a default — optionality to deploy at the cycle low
MEDIUM	USD	USD view neutral per layer mandate
LOW	^VIX	VIX compression is the dog that didn't bark: closed ~15.7 (RSI 40, 12.6% of 52w range, below all SMAs) THROUGH a -14% BTC crash

Bitcoin

> ⚠ 2 sentiment series past freshness SLA (worst: traditional-fear-greed is 10 days old, SLA 72h) — figures below may lag

Current State

BTC price: $62,766 (1d n/a, 7d +1.1%). Trend: below 50/200 SMA (downtrend). Data freshness: 2026-06-18.

On-chain and exchange-reserve context:

METRIC	LATEST	READ	FRESHNESS
Exchange reserve (proxy)	1180561 BTC	Exchange reserve proxy — falling balance is bullish (coins moving to cold storage) · 7d net flow -6888 BTC · 30d net flow +32778 BTC	2026-06-18

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	BTC	Structural read favors the 4-year-cycle-intact thesis over the 16-18y-topped thesis
LOW	BTC	Cause: crypto-idiosyncratic deleveraging into a firm dollar (DXY 100.8, +1.4% 7d) drives BTC to a fresh 6th-pctile 1y low at 62,840
MACRO	BTC	Structural digital-gold/self-custody bid intact (Fourth-Turning sovereignty demand, fixed supply vs fiat debasement)
MEDIUM	BTC	Rate-cycle read: the easing-leg hypothesis is NOT confirmed by the policy market — FedWatch prices ZERO July cut and a 40% HIKE tail
HIGH	BTC-USD	Structural bull case — the 4-year-cycle-intact read
LOW	BTC-USD	Week-in-review: crowded-long COT flush played out (managed-money 92nd pctile net-long May 28 → BTC -14% to ~62.8k)
MACRO	BTC-USD	Hard-money correlation regime test crossing from possible to probable (BTC-GC=F 7d +0.82, BTC-SPY -0.94, first such reading since Jan 2026) strengthens the structural read
MEDIUM	BTC-USD	Crowded futures longs + weak price + net ETF outflows → crowded-long-unwind risk dominates the 4-6wk horizon; ETF bid floors downside ~65-70k but positioning caps upside absent a Fed-cut surprise (Risk-On only 5%)
LOW	COIN	Senate Clarity Act discussion + Galaxy Digital BitLicense approval = regulatory momentum
LOW	MSTR	MSTR tech-heavy, momentum turning negative

Gold (and Precious Metals)

Current State

ASSET	SYMBOL	PRICE	DAILY CHG	WEEKLY CHG	TREND	FRESHNESS
Gold	GC=F	$4,214.3	n/a	+2.8%	below 50/200 SMA (downtrend)	2026-06-18
Silver	SI=F	$65.53	n/a	+2.1%	below 50/200 SMA (downtrend)	2026-06-18
Copper	HG=F	$6.37	n/a	+1.5%	above 50/200 SMA (uptrend)	2026-06-18

Real-yield context: 10Y TIPS real yield 2.23% with rising direction. Rising real yields raise the opportunity cost of holding non-yielding metals. Data freshness: 2026-06-17.

COMEX, COT, and supply rows are unavailable. Treat physical-market and positioning claims as unverified until those caches refresh.

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	GC=F	Strongest structural bull case among covered assets
LOW	GC=F	Cause: gold -5.8% 7d to 4,214 alongside a firming DXY, but COT managed-money is washed out at 1.9-pctile net-long (z-1.2) = the most short-skewed positioning in 12 months
MACRO	GC=F	Gold is the strongest structural macro bull case: it is ABOVE its weekly 200MA (~4214 vs ~3900-4000 200WMA), the measured structural-bull regime
MEDIUM	GC=F	Near-term tactical view neutral: repeated SMA50-reclaim setups off a stagflation/CPI chain have underperformed, and with the easing tailwind not yet priced (FedWatch 0% July cut), the bounce thesis lacks a catalyst until a Fed pivot
MEDIUM	GLC	War premium sticky; Central bank bids holding at 11.5th percentile COT
HIGH	GLD	Central bank gold buying structural (750-850t/yr projected 2026), BRICS de-dollarization accelerating (COFER 56.1%, fastest quarterly decline on record), Stage 6 transition confirmed (Dalio/Munich SC)
LOW	GLD	Real rate headwind (Fed hold, 10Y 4.35%) vs inflation support (CPI 3.3% sticky, Inflation Spike 73%)
MACRO	GLD	Empire transition reserve asset
MEDIUM	GLD	Inflation Spike scenario at 85% confidence
HIGH	HG=F	Supercycle copper thesis is now PRICE-DISCOVERED and realized, not aspirational
LOW	HG=F	Copper ICSG deficit 150-330K tonnes 2026 confirmed structural (Goldman highest conviction commodity)
MEDIUM	HG=F	Structural supply deficit confirmed (150-330K tonnes 2026 per ICSG)
HIGH	SI=F	Silver is the higher-beta leg of the same structural precious-metals/de-dollarization bull as gold, plus an industrial-electrification (solar/grid) demand layer that gold lacks — the commodity-supercycle + energy-transition double driver
LOW	SI=F	Cause: silver -11.2% on the week to 65.53 is the sharpest single-asset drawdown on the tape, far worse than gold's -5.8%
MACRO	SI=F	Silver is structurally bullish (monetary + industrial/solar demand) but a lower-conviction structural bull case than gold because it is the high-beta junior: in a Major-Cycle Long Winter it tends to underperform gold early (industrial leg drags in a slowdown) and whipsaws harder
MEDIUM	SI=F	Silver is the leveraged-gold + industrial-demand hybrid; this week it printed -11% vs gold's -6%, confirming its high-beta downside in a no-easing-yet regime

LAYER	FOCUS	VIEW
HIGH	SLV	Structural supply deficit intact but overshadowed by Hard Recession 62% scenario crushing industrial demand
LOW	SLV	Pure risk asset correlation with SPY +0.92
MACRO	SLV	Same thesis as SI=F — dual structural demand (industrial AI/solar/defense + monetary CB substitution when gold reaches political resistance)
MEDIUM	SLV	Silver exposed to same safe-haven + inflation bid as gold but with added industrial demand component (AI power demand, solar, semiconductors)

Tomorrow's Calendar

- 2026-06-18: Philadelphia Fed Manufacturing Index | Importance: medium | Relevance: forecast 9.
- 2026-06-18: 15-Year Mortgage Rate | Importance: low.
- 2026-06-18: 30-Year Mortgage Rate | Importance: low.
- 2026-06-18: 4-Week Bill Auction | Importance: low.
- 2026-06-18: 5-Year TIPS Auction | Importance: low.
- 2026-06-18: 8-Week Bill Auction | Importance: low.
- 2026-06-18: Baker Hughes Oil Rig Count | Importance: low.

Scenario Dashboard

SCENARIO	PROBABILITY	7D DELTA	NARRATIVE VS MONEY	KEY DRIVER	CONFIRMATION	INVALIDATION
Hard Recession	20%	n/a	n/a	n/a	n/a	n/a
AI-Bubble Top / Mega-IPO Distribution	20%	+2pp	n/a	Mega-IPO prices at/above peak private mark THEN breaks issue price within 90d; AI-capex guidance cuts broaden beyond AVGO to 2+ hyperscalers; SOX/QQQ lower-high while IPO supply hits; credit spreads widen	n/a	n/a
Inflation Spike	18%	+2pp	n/a	n/a	n/a	n/a
De-Dollarization Acceleration	13%	-1pp	n/a	COFER Q2 below 54.5% (mid-July); DXY weekly close below 96.5; US Treasury auction tail/failure; BTC-SPY 30d correlation below 0.40 on 50%+ of Q3 days; any G7 CB announcing RMB/gold reserve reallocation	n/a	n/a

SCENARIO	PROBABILITY	7D DELTA	NARRATIVE VS MONEY	KEY DRIVER	CONFIRMATION	INVALIDATION
Major-Cycle Top / Long Winter	13%	n/a	n/a	Post-Oct-2026 BTC bounce fails to reclaim Oct-2025 ATH 124.7k and rolls to lower high; SPY loses weekly 200MA and stays below; gold/equity ratio keeps rising; the 4yr-low rally is weak/low-volume (poor Loukas translation)	n/a	n/a
Hard-Money HTF Reversal	10%	-2pp	n/a	DXY sustained weekly close below 96.5; BTC-SPY 30d corr below 0.40 on a majority of days for 4+ weeks; gold reclaiming and holding above its 50-week SMA; BTC weekly close above prior cycle mid-range with rising on-chain accumulation; Fed cuts compressing	n/a	n/a

SCENARIO	PROBABILITY	7D DELTA	NARRATIVE VS MONEY	KEY DRIVER	CONFIRMATION	INVALIDATION
				10Y real yield below +1.5%		
Iran-US War Escalation	3%	-2pp	n/a	n/a	n/a	n/a
Risk-On Rally	1%	-1pp	n/a	n/a	n/a	n/a
Other / Unmodelled	2%	n/a	residual uncertainty bucket	Outcomes outside named scenarios	n/a	n/a

Scenario probabilities use a normalized scenario-set model: named scenarios plus Other / Unmodelled sum to 100%.

How We Analyse

We track prediction accountability, calibration, source quality, and lessons from prior misses so daily market reads do not stand alone as unsupported narrative.

Calibration:

{calibration_dot_plot(public_calibration)}

LAYER	CONVICTION BAND	PREDICTED	OBSERVED	SAMPLES	CAVEAT
HIGH	high	80%	50%	1	low sample
HIGH	medium	65%	100%	1	low sample
LOW	high	71%	88%	4	low sample
LOW	low	48%	25%	4	low sample
LOW	medium	61%	48%	27	sample ok
MEDIUM	high	0%	0%	4	low sample
MEDIUM	low	0%	0%	1	low sample
MEDIUM	medium	64%	61%	18	low sample

Lessons applied: no structured lessons were attached in the last 24h. Treat this as an accountability gap rather than evidence that no prior lessons mattered.

Prediction-market intelligence: no active or newly relevant prediction rows are attached to this build.

News-quality filter: no source-tier overrides were attached. Use `pftui data news sources list --json` to audit current source tiers.

Allocation Framework

These are generic, regime-aware ranges for different investor types. They are not account-specific sizing, execution instructions, or a statement of the correct mix for any specific account.

Regime context: transition ([] (confidence 33%)). Dominant scenario input: AI-Bubble Top / Mega-IPO Distribution at 20% probability.

FRAMEWORK	INVESTOR TYPE	CASH	BTC	GOLD/SILVER	EQUITIES	COMMODITIES	TREASURIES
Conservative	capital-preservation investors in a volatile regime	25-40%	0-5%	10-20%	20-35%	5-10%	20-35%
Balanced	investors balancing drawdown control with participation	10-25%	5-15%	10-20%	35-50%	5-15%	10-25%
Conviction-Driven	investors with high tolerance for volatility and thesis concentration	5-15%	15-30%	15-30%	25-45%	5-15%	0-15%

Framework interpretation: - Conservative: emphasises liquidity, sovereign duration, and modest hard-asset protection while keeping equity and BTC exposure constrained. - Balanced: keeps broad equity participation while reserving meaningful liquidity, hard-asset, and rates-sensitive ballast. - Conviction-Driven: allows higher BTC and precious-metals exposure when the thesis is strong, while retaining some liquidity and cyclical optionality. - Range endpoints are guardrails for generic discussion, not live trading bands.

Methodology

Report Date: 2026-06-18

Data Freshness:

SOURCE	LAST FETCH	RECORDS	STATUS

This report is produced by **pftui**, an open-source multi-timeframe analytics engine.

Architecture: Four specialist AI agents independently analyse markets at different time horizons: LOW (hours to days: price action, technicals, breaking news), MEDIUM (weeks to months: economic cycles, policy shifts, scenario management), HIGH (months to years: structural trends, technology disruption, commodity supercycles), and MACRO (years to decades: empire cycles, reserve currency transitions, power structure shifts). A cross-timeframe synthesis layer reconciles their outputs, surfacing both consensus and disagreement. The disagreements are often the most valuable signal.

Data: 19+ sources are aggregated into the pftui data store. Prices, technicals (RSI, SMA, MACD computed natively in Rust), COT positioning, COMEX vault inventory, FRED economic data, CME FedWatch probabilities, on-chain metrics, ETF flows, news feeds, economic calendar, and prediction market data can all feed the public report. One refresh command pulls the core data path.

First Principles: - Follow the money, not the narrative. Track what institutions do, not what they say. - Public statements from governments and institutions are tactical, not informational. - Every divergence between rhetoric and capital flows is an intelligence signal. - Predictions must be falsifiable, time-bound, and scored honestly. - The system learns from its mistakes. Past prediction accuracy informs future confidence.

Accountability: Every prediction is logged, scored, and reviewed. Per-layer strict hit rate is published with scored sample size and uncertainty where available; layers with too few scored predictions are marked as low sample. Wrong calls are analysed for what was missed, and the lessons feed back into the analytical framework.
