

PFTUI Daily Intelligence Report

June 3, 2026

Multi-Timeframe Market Intelligence

By Skylar Simoncelli

Confidential

Executive Summary

pftui classifies the current regime as risk off. Conviction changed: DX-Y.NYB. The central tension is 2 recap events • 8 surprises • 52% hit rate. VIX/oil stress or DXY/gold up with equities down (confidence 40%).

The multi-timeframe analyst layer has not produced current convergence rows for this run. Without LOW, MEDIUM, HIGH, and MACRO agreement data, the executive view should stay provisional rather than overstating consensus.

The most important scenario input is Risk-On Rally at 5% probability with a -3pp 7-day move. Read this as one bucket in the normalized scenario set, not as an overlapping marginal probability.

The top catalyst to carry into the rest of the report is Israel's Strategic Problem - Geopolitical Futures. iran-hormuz.

Market Snapshot

ASSET	PRICE	DAILY CHG	WEEKLY CHG	SIGNAL
BTC	\$67119	n/a	-11.5%	below 50 SMA, above 200 SMA
Gold	\$4490.7	n/a	+1.0%	below 50/200 SMA (downtrend)
Silver	\$74.67	n/a	+0.1%	below 50 SMA, above 200 SMA
WTI Crude	\$95.25	n/a	+2.5%	below 50 SMA, above 200 SMA
DXY	\$99.45	n/a	+0.2%	above 50/200 SMA (uptrend)
S&P 500	\$7609.78	n/a	+1.2%	above 50/200 SMA (uptrend)
Nasdaq 100	\$30660.6	n/a	+4.0%	above 50/200 SMA (uptrend)
VIX	\$16.24	n/a	-2.8%	below 50/200 SMA (downtrend)
10Y Yield	\$4.49	n/a	-1.5%	above 50/200 SMA (uptrend)

Macro

Current State

Regime state: risk off. VIX/oil stress or DXY/gold up with equities down (confidence 40%).

INDICATOR	LATEST	DIRECTION	FRESHNESS
CPI YoY	2.6	n/a	2026-06-03
Fed Funds Rate	3.5	n/a	2026-06-03
Initial Jobless Claims	134000	n/a	2026-06-03
Nonfarm Payrolls	2024	n/a	2026-06-03
PMI (Manufacturing)	54	up 4	2026-06-03
PMI (Services)	54	up 4	2026-06-03
PPI	14	n/a	2026-06-03
Unemployment Rate	4.3	n/a	2026-06-03

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	DX-Y.NYB	Structural bear -2 (managed-decline not collapse)
LOW	DX-Y.NYB	Warsh hawkish signal (+4 conviction jump May 24) creates near-term support 99-99.5, but COFER 56.1% (~31yr low) structural bear thesis intact
MACRO	DX-Y.NYB	Long-term structural bear case intact: COFER 56.1% Q1 (31-year low, fastest quarterly decline on record) on trajectory to 55% by Q3 and 50% by 2027
MEDIUM	DX-Y.NYB	Tight consolidation 98.6-100 with mild upside bias from two-driver thesis (safe-haven + rate differential per Lesson 307)
MACRO	DXY	Structural de-dollarisation bear (COFER -2.3pp/qtr, reserve_currency determinant 7→6) but near-term FIRM on positive real carry + safe-haven bid; structural and tactical point opposite ways
HIGH	SPY	Structural bear -3
LOW	SPY	Index masks violent internal rotation: semis/AI-power up double digits while consumer/crypto-beta names dump — breadth is narrow and concentrated
MEDIUM	SPY	Range 720-755 base case (~60%); asymmetric downside risk on hot PCE because RSI 68.7 on May 26 sits at the overbought edge
HIGH	USD	Cash USD: HIGH-layer view = neutral as a CASH instrument (not the dollar as global reserve, where view is bear -2)
LOW	USD	USD broke below SMA200 (98.63 → 98.24) on Iran ceasefire relief and BRICS de-dollarization momentum
MACRO	USD	USD structural bear case: COFER 56.1% at fastest quarterly decline ever, down from 72% (2001)
MEDIUM	USD	Medium-term USD weakness as inflation persists + real rates rise (bond market, not Fed policy, is setting terms)
LOW	^VIX	Vol compression regime in force

What to Watch

DATE	EVENT	IMPORTANCE	MARKET RELEVANCE
2026-06-03	Factory Orders MoM	medium	forecast 2.7%
2026-06-03	Factory Orders ex Transportation	medium	forecast 0.8%
2026-06-03	17-Week Bill Auction	low	n/a
2026-06-03	EIA Crude Oil Imports Change	low	n/a
2026-06-03	EIA Crude Oil Stocks Change	low	n/a

2026-06-03	EIA Gasoline Production Change	low	n/a
2026-06-03	EIA Gasoline Stocks Change	low	n/a
2026-06-03	EIA Heating Oil Stocks Change	low	n/a
2026-06-03	EIA Refinery Crude Runs Change	low	n/a

Bitcoin

Current State

BTC price: \$67119 (1d n/a, 7d -11.5%). Trend: below 50 SMA, above 200 SMA. Data freshness: 2026-06-03.

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	BTC	Sovereign-adoption + fixed-supply thesis intact long-run, but the near-term digital-gold cluster that justified higher conviction has decayed and capital flows now lag the narrative; cause→mechanism: rising exchange reserves + ETF outflows → weakening self-custody → BTC drifting toward FIC-custodied asset rather than sovereign resistance
LOW	BTC	Crowded-long COT (92.3 pctile 1y, z+2.0) → forced deleveraging → -8.6% to 67,119 today as the last marginal longs got flushed; ETF net outflow -464 BTC and 7d exchange INFLOW +18,396 BTC confirm distribution not contrarian dip-buying
MACRO	BTC	Multi-year sovereign escape asset (Proof-of-Work), but market structure now Wall-Street-correlated; today's -8.6% is crowded-long unwind (COT 92nd pctile), not structural breakdown
HIGH	BTC-USD	Structural bull +3
LOW	BTC-USD	Tactical bearish on 1-5 day window: BTC printed below lower Bollinger (73,913) on -4.66% capitulation, second consecutive net-out ETF session (-1,192 BTC today, IBIT 0), 7d BTC-SPY correlation flipped to -0.94 = institutional bid floor that supported the COT 92.3-pctile crowded long has been removed; mechanism is positioning unwind, not stop spiral, so downside is capped near 70-72k psychological floor; cause→mechanism→effect: ETF bid removal → forced de-risking from crowded longs → 70-76k range with downside skew
MACRO	BTC-USD	Hard-money correlation regime test crossing from possible to probable (BTC-GC=F 7d +0.82, BTC-SPY -0.94, first such reading since Jan 2026) lifts conviction one notch
MEDIUM	BTC-USD	Crowded futures longs + weak price + net ETF outflows → crowded-long-unwind risk dominates the 4-6wk horizon; ETF bid floors downside ~65-70k but positioning caps upside absent a Fed-cut surprise (Risk-On only 5%)
LOW	COIN	Senate Clarity Act discussion + Galaxy Digital BitLicense approval = regulatory momentum
LOW	MSTR	MSTR tech-heavy, momentum turning negative

Gold (and Precious Metals)

Current State

ASSET	SYMBOL	PRICE	DAILY CHG	WEEKLY CHG	TREND	FRESHNESS
Gold	GC=F	\$4490.7	n/a	+1.0%	below 50/200 SMA (downtrend)	2026-06-03
Silver	SI=F	\$74.67	n/a	+0.1%	below 50 SMA, above 200 SMA	2026-06-03
Copper	HG=F	\$6.58	n/a	+3.1%	above 50/200 SMA (uptrend)	2026-06-03

Real-yield context: 5Y TIPS real yield 1.64% with rising direction. Rising real yields raise the opportunity cost of holding non-yielding metals. Data freshness: 2026-06-01.

COMEX, COT, and supply rows are unavailable. Treat physical-market and positioning claims as unverified until those caches refresh.

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	GC=F	Structural CB demand floor (~750-850t/yr 2026) + de-dollarisation reserve reallocation (COFER 56.1% 31-yr low) is non-cyclical; washed-out COT positioning (1.9 pctile) sets up favorable risk/reward into that floor
LOW	GC=F	Gold COT managed-money net-long at 1.9 pctile (1y), z-1.2 = positioning washed out → contrarian room to run; gold +0.95% to 4490 today while BTC/equities-crypto sold off, and gold/SPY corr collapsed 0.65→0.08 = gold reasserting independent safe-haven bid not tethered to risk assets
MACRO	GC=F	Empire-transition reserve asset on structural CB accumulation (~850t/yr), but bull is on PAUSE not advance: positive US real carry (~+1.8%) + firm DXY cap price below 4,500 near-term
MEDIUM	GC=F	Structural CB bid → gold decoupled from macro-beta cluster (VIX/SPY/USD corr collapsed to ~0) → trades on official-sector accumulation; tactically range-bound below SMA50 until DXY closes sub-98
MEDIUM	GLC	War premium sticky; Central bank bids holding at 11.5th percentile COT
HIGH	GLD	Central bank gold buying structural (750-850t/yr projected 2026), BRICS de-dollarization accelerating (COFER 56.1%, fastest quarterly decline on record), Stage 6 transition confirmed (Dalio/Munich SC)
LOW	GLD	Real rate headwind (Fed hold, 10Y 4.35%) vs inflation support (CPI 3.3% sticky, Inflation Spike 73%)
MACRO	GLD	Empire transition reserve asset
MEDIUM	GLD	Inflation Spike scenario at 85% confidence
HIGH	HG=F	Structural copper deficit is now price-discovered: cause→mechanism→effect = ICSG 150-330K tonne 2026 deficit + AI-datacentre 475K t/yr demand + no major new mine before 2028 → binding supply constraint → price breakout above structural target
LOW	HG=F	Copper ICSG deficit 150-330K tonnes 2026 confirmed structural (Goldman highest conviction commodity)
MEDIUM	HG=F	Structural supply deficit confirmed (150-330K tonnes 2026 per ICSG)
HIGH	SI=F	Silver rides the same hard-money + electrification/industrial-deficit dual mandate as gold and copper; monetary metal in the de-dollarisation reallocation AND solar/grid industrial demand
LOW	SI=F	Silver tracking gold tightly (SI=F/GC=F 7d corr +0.93) with COT net-long only 30.8 pctile = room to run; SI=F 74.67 holding
MACRO	SI=F	Hard-money + industrial-demand dual driver, but silver trades as high-beta gold AND a recession-sensitive risk asset, leaving it caught between debasement bull and hard-recession bear

LAYER	FOCUS	VIEW
MEDIUM	SI=F	Silver mechanically tracks gold's DXY-ceilinged range (high silver-gold corr) with industrial-demand support, but lacks gold's extreme-short COT floor so the range is tighter and the catalyst weaker this window
HIGH	SLV	Structural supply deficit intact but overshadowed by Hard Recession 62% scenario crushing industrial demand
LOW	SLV	Pure risk asset correlation with SPY +0.92
MACRO	SLV	Same thesis as SI=F — dual structural demand (industrial AI/solar/defense + monetary CB substitution when gold reaches political resistance)
MEDIUM	SLV	Silver exposed to same safe-haven + inflation bid as gold but with added industrial demand component (AI power demand, solar, semiconductors)

Breadth data is unavailable. Treat index-level strength or weakness as price-only until advance/decline or participation data refreshes.

Earnings-calendar context is unavailable, so this section does not make earnings-season or revision-breadth claims.

Multi-Timeframe View

LAYER	FOCUS	VIEW
HIGH	CCJ	Trend 2 nuclear renaissance CAPEX-validated
LOW	CCJ	Uranium/AI-power names ripped today (CCJ +12.2%, COPX +8.8%, AVGO +14%, NVDA +4.8%) while crypto and consumer-tech (AMZN -5.6%, ASTS -8.8%) sold off — capital is rotating INTO the AI-power/hard-resource complex, not exiting risk wholesale
MACRO	CCJ	Nuclear renaissance + sovereign energy security + AI power demand
MEDIUM	CCJ	AI nuclear demand thesis now in execution phase (Rolls-Royce Wylfa contracts signed, Linglong One H1 2026 online)
HIGH	GOOG	Google faces a dual structural threat: AI disruption of its core search revenue model, AND the white-collar displacement destroying the consumer spending base that funds ad revenue
LOW	HOOD	Down -13.24% on day, breaking below SMA200
LOW	RKLB	ATR range expansion, 52-week high, RSI 70 overbought but momentum unbroken
HIGH	SPY	Structural bear -3
LOW	SPY	Index masks violent internal rotation: semis/AI-power up double digits while consumer/crypto-beta names dump — breadth is narrow and concentrated
MEDIUM	SPY	Range 720-755 base case (~60%); asymmetric downside risk on hot PCE because RSI 68.7 on May 26 sits at the overbought edge

Scenario Dashboard

SCENARIO	PROBABILITY	7D DELTA	NARRATIVE VS MONEY	KEY DRIVER	CONFIRMATION	INVALIDATION
Inflation Spike	50%	n/a	n/a	n/a	n/a	n/a
Hard Recession	32%	-2pp	n/a	n/a	n/a	n/a
Iran-US War Escalation	12%	n/a	n/a	n/a	n/a	n/a
Risk-On Rally	5%	-3pp	n/a	n/a	n/a	n/a
Other / Unmodelled	1%	n/a	residual uncertainty bucket	Outcomes outside named scenarios	n/a	n/a

Scenario probabilities use a normalized scenario-set model: named scenarios plus Other / Unmodelled sum to 100%.

How We Analyse

We track prediction accountability, calibration, source quality, and lessons from prior misses so daily market reads do not stand alone as unsupported narrative.

Calibration: no reliability rows are attached to this build, so the report cannot show a calibration chart for this run.

Lessons applied: no structured lessons were attached in the last 24h. Treat this as an accountability gap rather than evidence that no prior lessons mattered.

Prediction-market intelligence: no active or newly relevant prediction rows are attached to this build.

News-quality filter: no source-tier overrides were attached. Use `pftui data news sources list --json` to audit current source tiers.

Allocation Framework

These are generic, regime-aware ranges for different investor types. They are not account-specific sizing, execution instructions, or a statement of the correct mix for any specific account.

Regime context: risk off (VIX/oil stress or DXY/gold up with equities down (confidence 40%)). Dominant scenario input: Inflation Spike at 50% probability.

FRAMEWORK	INVESTOR TYPE	CASH	BTC	GOLD/SILVER	EQUITIES	COMMODITIES	TREASURIES
Conservative	capital-preservation investors in a volatile regime	25-40%	0-5%	10-20%	20-35%	5-10%	20-35%
Balanced	investors balancing drawdown control with participation	10-25%	5-15%	10-20%	35-50%	5-15%	10-25%
Conviction-Driven	investors with high tolerance for volatility and thesis concentration	5-15%	15-30%	15-30%	25-45%	5-15%	0-15%

Framework interpretation: - Conservative: emphasises liquidity, sovereign duration, and modest hard-asset protection while keeping equity and BTC exposure constrained. - Balanced: keeps broad equity participation while reserving meaningful liquidity, hard-

asset, and rates-sensitive ballast. - Conviction-Driven: allows higher BTC and precious-metals exposure when the thesis is strong, while retaining some liquidity and cyclical optionality. - Range endpoints are guardrails for generic discussion, not live trading bands.

This report is produced by **pftui**, an open-source multi-timeframe analytics engine.

Architecture: Four specialist AI agents independently analyse markets at different time horizons: LOW (hours to days: price action, technicals, breaking news), MEDIUM (weeks to months: economic cycles, policy shifts, scenario management), HIGH (months to years: structural trends, technology disruption, commodity supercycles), and MACRO (years to decades: empire cycles, reserve currency transitions, power structure shifts). A cross-timeframe synthesis layer reconciles their outputs, surfacing both consensus and disagreement. The disagreements are often the most valuable signal.

Data: 19+ sources are aggregated into the pftui data store. Prices, technicals (RSI, SMA, MACD computed natively in Rust), COT positioning, COMEX vault inventory, FRED economic data, CME FedWatch probabilities, on-chain metrics, ETF flows, news feeds, economic calendar, and prediction market data can all feed the public report. One refresh command pulls the core data path.

First Principles: - Follow the money, not the narrative. Track what institutions do, not what they say. - Public statements from governments and institutions are tactical, not informational. - Every divergence between rhetoric and capital flows is an intelligence signal. - Predictions must be falsifiable, time-bound, and scored honestly. - The system learns from its mistakes. Past prediction accuracy informs future confidence.

Accountability: Every prediction is logged, scored, and reviewed. Per-layer strict hit rate is published with scored sample size and uncertainty where available; layers with too few scored predictions are marked as low sample. Wrong calls are analysed for what was missed, and the lessons feed back into the analytical framework.
